

SDEVEN Software Development & Engineering Methodology

Version: 7.0.9

Release date: 230801

Operational Meetings (SDEVEN.45-OPME)

Table of Content

- [Operational Meetings \(SDEVEN.45-OPME\)](#)
 - [Preamble](#)
 - [The sprint event and process](#)
 - [Type of meetings](#)
 - [devPLAN development planning](#)
 - [devOPER operational schedule](#)
 - [devREVIEW operational review](#)

- [prodRE VW product goals review](#)
- [Notes and abbreviations used in procedure](#)

Preamble

This procedure treat production and planning meetings that take place in software development process.

Agile SCRUM compliance

Procedure follow Agile SCRUM methodology recommendations for meeting types.

From this perspective the meetings has two important sessions (aka discussion panels, sections). These sessions should be clearly marked on meeting agenda, meaning should be clear from agenda level what is the *principal session objective*:

- **planning** for next with `PLAN code-name`¹
- **review** of what was done with `RE VW code-name`²

Of course, in each session inherently can happen things of both types, but *the principal session objective* should be just one of them.

The `sprint` event and process

Before discussing *OPME meetings* a brief description of `sprint` concept could be necessary.

The `sprint` term describe the process (named event in "*Scrum Guide...*") where ideas, things are put in practice. It is a normal `software development` process like any other one and has the following properties.

`sprint` properties

It is a fixed length event of one month or less to create consistency. A new `sprint` starts immediately after the conclusion of the previous `sprint`. All the work necessary to achieve the goals / objectives including its *planning*, *review*, *execution*, etc happen within `sprints`.

These properties determine the nature of *software development approach* which, by using `sprints` becomes an *iterative* and *evolutionary (spiral model)* one.

Type of meetings

The **OPME** meetings can be first classified using 2 perspectives:

- *objective* (`OBJ code-name`³) that was shortly discussed in previously section and can be a mix but with clear sections (discussion pannels)

- *frequency* (**FRQ** *code-name*⁴) of repetition and *duration* (**DUR** *code-name*⁵) of each one

The **OPME** meetings are highly thought out to fit into the previous classifications WITHOUT CREATING mixes within each class or at least MINIMIZING the mixes.

OPME Meetings

The following types of meetings can be held:

- **development planning** (**devPLAN** *code-name*) meeting (Agile SCRUM equivalent event: Sprint Planning)
- **operational schedule** (**devOPER** *code-name*) meeting (Agile SCRUM equivalent event: Daily Scrum)
- **operational review** (**devREVIEW** *code-name*) meeting (Agile SCRUM equivalent event: Scrum Review)
- **product goals review** (**prodREVIEW** *code-name*) meeting (Agile SCRUM equivalent event: Scrum Retrospective)

devPLAN development planning

This meeting has goal to plan the start and execution of a **sprint** which will call **sprintPLAN** in next. Also should note that a (any) **sprint** has a specific / principal objective (keep ONE to make sure the sprint is sprint !!!) which will be called **sprintOBJ** in next.

sprintPLAN CONSTRAINTS

A **sprintPLAN** must take into account the following *constraint assumptions* during its execution:

- no changes will be made, especially changes that would endanger the **sprintOBJ**
- established quality (factors) will not decrease
- the **sprint** corresponding *CHANGELOG* is refined as needed
- scope may be clarified and renegotiated with the Product Owner / Product Manager as more is useful *but having in mind first assumption*
- the **sprintPLAN** is the subject of ROADMAP file update

But *where comes from* the **sprint** ? Well, it comes from a *list with issues*, usually found on ROADMAP file or a shorter list, but ROADMAP is the preferred place and this is "the way" SDEVEN recommend ([see also the SDEVEN.55_TRACE procedure](#)).

Otherwise, a **sprintPLAN** is absolutely similar to any other software development plan regarding an issue that has a *clear and completely defined finality*.

All the good practices and technical rules in software engineering, for example regarding maintainability, *must be considered* as in any software development plan made with maximum responsibility and care in observing the rules of software engineering.

**devPLAN Properties**

- principal objective: planning
- frequency: weekly

devOPER operational schedule

The purpose of the **devOPER** is to inspect progress toward the **sprintOBJ** and adapt the specifications (initial ROADMAP information) as necessary, adjusting the upcoming planned work.

The **devOPER** is a *15-minute to 20-minute* event for the developers of the **sprint** execution team. To reduce complexity, it is held at the same time and place every working day of the **sprint**. All participants ***should act as developers*** regardless their actual position in project.

**devOPER Properties**

- principal objective: review
- frequency: daily

devREVV operational review

The purpose of the **devREVV** is to inspect the outcome of a **finalized** **sprint** and determine future adaptations. The team involved (including project manager) presents the results of their work to *Product Manager* (and other key stakeholders if they are participating) and **progress toward the** **sprintOBJ** is discussed.

During the meeting, the whole participating team review what was accomplished and what has changed in their environment. Based on this information, attendees collaborate on what to do next.

The *ROADMAP*, *CHANGELOG* and *RELNOTE* documents may also be adjusted to meet new opportunities. The **devREVV** is a working session and the team ***should avoid limiting it to a simple presentation*** of facts.

**devREVV Properties**

- principal objective: review
- frequency: minimum at 2 weeks

prodREVV product goals review

-#TODO_tbd... #NOTE review this section ----- from HERE

The purpose of the Sprint Retrospective is to plan ways to increase quality and effectiveness.

The Scrum Team inspects how the last Sprint went with regards to individuals, interactions, processes, tools, and their Definition of Done. Inspected elements often vary with the domain of work. Assumptions that led them astray are identified and their origins explored. The Scrum Team discusses what went well during the Sprint, what problems it encountered, and how those problems were (or were not) solved.

The Scrum Team identifies the most helpful changes to improve its effectiveness. The most impactful improvements are addressed as soon as possible. They may even be added to the Sprint Backlog for the next Sprint.

The Sprint Retrospective concludes the Sprint. It is timeboxed to a maximum of three hours for a one-month Sprint. For shorter Sprints, the event is usually shorter.

-#NOTE ----- up HERE

 **prodREVV Properties**

- principal objective: review
- frequency: monthly

Notes and abbreviations used in procedure

1. PLAN

describe a type of OPME meeting where *planning is the principal objective*

↩
2. REVW

describe a type of OPME meeting where *review and actual situation analysis are the principal objectives*

↩
3. OBJ

acronym used to show the *principal objective* of a OPME meeting - can be REVW or PLAN

↩
4. FRQ

acronym used to show the *frequency* of an OPME meeting

↩
5. DUR

acronym used to show the *duration* of an OPME meeting

↩
